1 - Math and Science Elective: Chosen from the SEAS Undergraduate Dean's Office Approved List of Math and Science Electives, available online and in A-122 Thornton.

ENGR 2500 is recommended for Nanotech concentration, but is not required.

MSE 2090 and ENGR 2500 are offered in both fall and spring, which allows for flexibility in fulfilling the Math and Science Elective.

2 - ENGR 3610 is required for the nanotechnology concentration. Both ENGR 2500 and ENGR 3610 may be included in the nanotech con.

3 - Advanced math/CS elective: 3xxx-level or higher mathematics courses in SEAS or CLAS; or one 2xxx-level or higher course in computer science.

4 - A minor in MSE is a component of the concentration. MSE 2090, 3050, 3060, and 3101 are required. One additional MSE course is required for the minor. If MSE 3670 and MSE 4055 are selected for the nanotechnology concentration, then other MSE courses should be used to fulfill the 5-course minor. MSE 3080 is recommended for the minor.

5 - Science Elective: Either CHEM 1620 with lab or PHYS 2620 is required.

6 - Secondary minor electives must be chosen so as to earn an approved technical minor in SEAS, mathematics, or a natural science. Nanotechnology students may add additional MSE concentration courses and tech electives in place of the secondary minor. Check minor department requirements for number of courses and prereqs.

7 - Unrestricted electives may be chosen from any graded course in the University except mathematics courses below MATH 1310, including STAT 1100 and STAT 1120, and courses that substantially duplicate others used for the student's degree.

8 - The Advanced Independent Project is a graded 4th-year research, independent study, or design course. Individual or group projects are possible.

9 - Area of Concentration: 5 courses - ENGR 2610 is required, then select 4 AOC courses from: MAE 3130, ENGR 2500, CHE 4442, ECE 4140, MSE 3670, MSE 4055. Technical electives include any 2xxx level or above engineering, math, or science classes.
